

Term Project

: LLM based Q/A system

Sangkeun Jung

Term Project Objectives

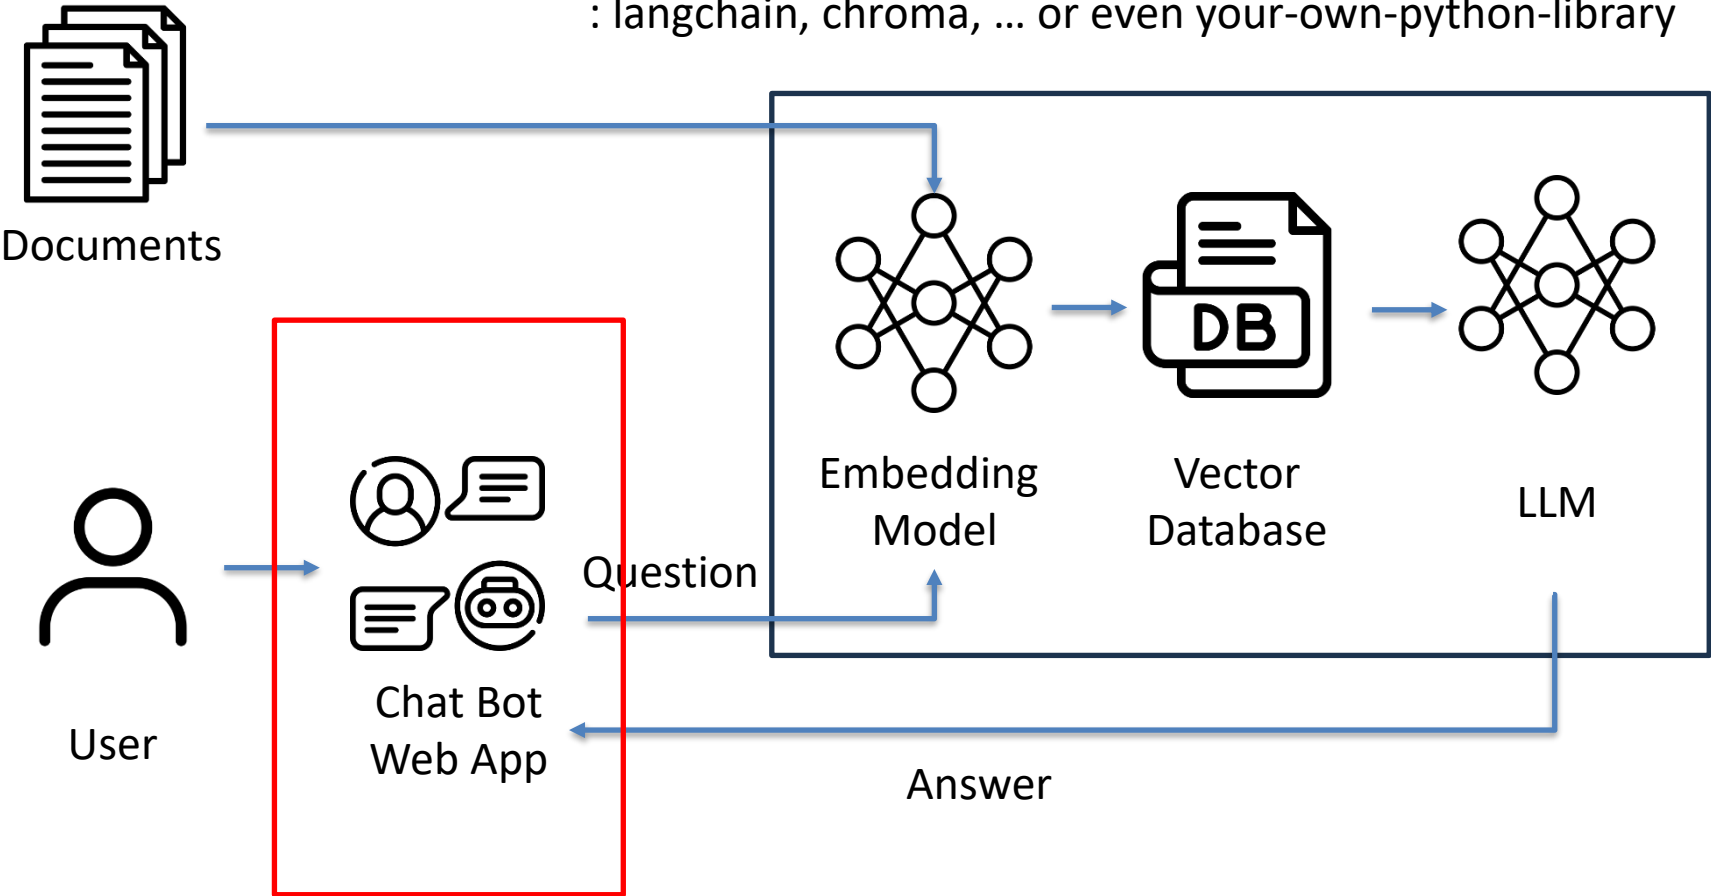

- Understand the implementation of Q/A systems using LLMs.
- Implement a RAG (Retrieval-Augmented Generation) or a LLM-QA system.
- Develop a practical Q/A system applicable to the field of Machine Learning.

“직접 데이터를 모아서 진행할 것”

- 이미 기 구축된 데이터 셋 안됨
- 반드시 직접 수동/자동으로 데이터 구축할 것
- 적절한 추가 LLM 훈련 권장
- 성능을 빠르게 확인하여 언어/데이터를 결정할 것

Task Description

You can use any tool
: langchain, chroma, ... or even your-own-python-library

Objective : You should build working-chatbot-system and API.

Example | Working Chatbot System

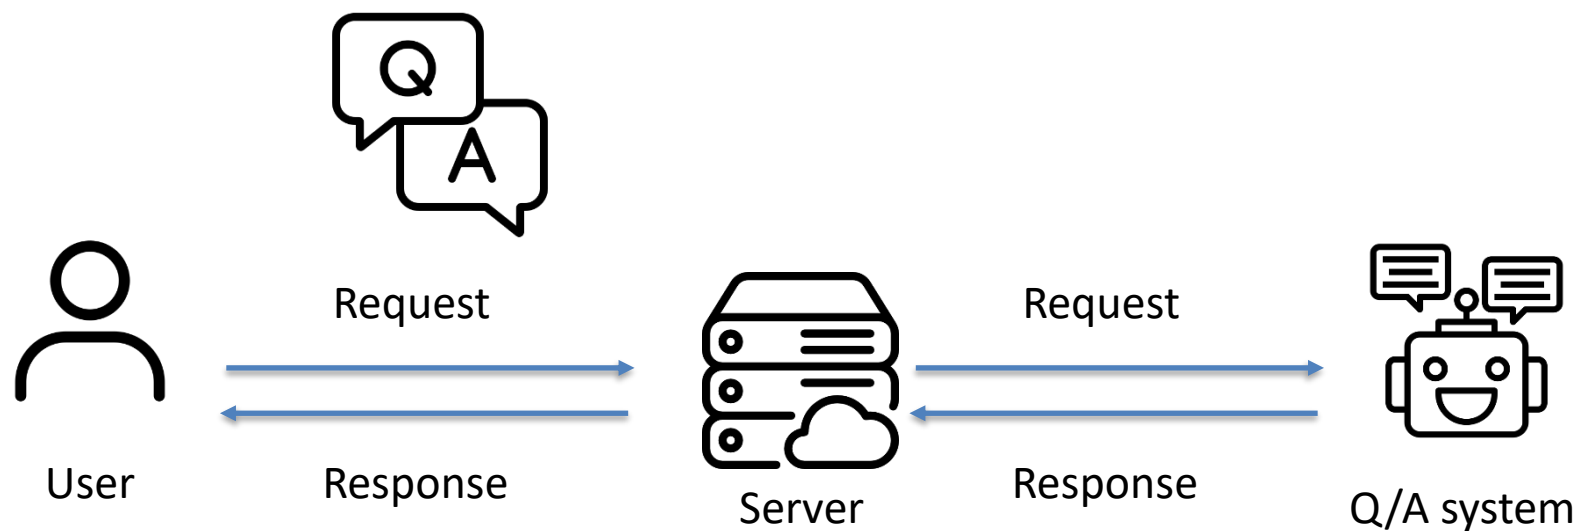

Ask a question:

What mechanism powers the Transformer?

Answer

The Transformer is powered by a sequence of self-attention blocks.

Example | Working API

Evaluation

- 1차 평가 (정성 평가) : **소프트웨어가 정상 작동하는지를 중심으로 평가**
